The Staubli Robotics Suite integrates everything you need to communicate and control your Staubli robots. It is designed to be a visual software solution for both experts and beginners, with a clearly laid-out and easy-to-follow interface. 1. The Staubli Robotics Suite The Staubli Robotics Suite is designed for everyone who needs to interact with their Staubli robots. It consists of the following two parts. Staubli Robotics Control – The software for the real-time, online control of your Staubli robots. Staubli Robotics – The software that makes your Staubli robots speak the same language. Staubli Robotics Suite Each of these parts has many functions and possibilities, so you can get as creative as you want. 2. Staubli Robotics Control Staubli Robotics Control In the Staubli Robotics Control, the user is presented with a window displaying the real-time data of the Staubli robot and the programs currently in execution. When the robot is active, you can control the robot's action and direction at any time by simply

touching a button. Touching the “Home” button returns the robot to its initial position. This software communicates with the user’s own program, the controller, the robot or any attached device. If you choose to share a controller, you can save the current program on the robot or upload a program created by you or your team. The Stäubli Robotics Suite comes with the Control Manager, which makes it possible to view or modify data and robot configurations. On the left side of the software window, you will find: A menu where you can directly modify the settings and the configuration of the robot Information on the current program being run, such as program name, program number, program status, program error and any attached sensors Alert messages that may indicate a fault, such as program failure or unsuccessful connection to the controller 3. Stäubli Robotics Stäubli Robotics The Stäubli Robotics consists of several modules. The Robot Data and Configuration Module contains all the real-time information about the robot, including all the sensor data, the robot’s position, the current programs being executed and 82157476af
